

VIKRANT SAINI

Faridabad, Haryana | +91 8800186424 | vikrantsaini1996@gmail.com

PROFESSIONAL SUMMARY

IT Infrastructure and Cyber Security professional with 5+ years of experience in enterprise IT support, endpoint management, and network administration across telecom and healthcare environments, currently serving as IT Executive at the Bharti Airtel client site. Proficient in Microsoft Intune, JAMF, Microsoft 365, Active Directory, Cisco VPN, ServiceNow, CrowdStrike Falcon, and Forcepoint DLP. Certified Ethical Hacker (CEH) trained with hands-on lab and project experience in Linux, Nmap, Metasploit, OSINT, vulnerability assessment, MITM attacks, Wi-Fi security, and password cracking, including a completed capstone vulnerability assessment and exploitation project, and a Deloitte Cyber Job Simulation focused on security log analysis. Seeking to transition into a SOC Analyst / Cyber Security Analyst role.

CORE SKILLS

IT & Endpoint Management: Windows, macOS, Microsoft Intune (MDM/MAM), JAMF, SCCM, ServiceNow, Microsoft 365 Admin, Active Directory

Networking: VLANs, Trunk/Access Ports, DHCP, DNS, Subnetting, Cisco VPN, CVP Portal (Wi-Fi network scanning)

Security Tools: CrowdStrike Falcon, Forcepoint DLP, JumpCloud MFA, Wireshark

Ethical Hacking (CEH Training): Nmap, Metasploit, MSF Console, Armitage, OSINT, Google Dorking, Linux, Session Hijacking, Cryptography Basics

Security Analysis: Web/authentication log review, anomaly & incident identification, session-based access analysis

Other: Hardware troubleshooting, video conferencing (Webex, Zoom, Teams), CCTV/NVR & biometric systems, customer support

PROFESSIONAL EXPERIENCE

IT Executive — Vayam Info Solutions (Client Site: Bharti Airtel)

May 2023 – Present

- Lead a team providing end-user and VP-level IT support using ServiceNow.
- Manage Microsoft Intune (MDM/MAM) for application deployment, device compliance, enrollment, and Windows Update deployment.
- Provide MacBook support including JAMF enrollment and policy troubleshooting.
- Configure Outlook and Mobile Outlook via Intune Compliance Policy (Intune-CP) for secure, compliance-based access.
- Configure Cisco VPN for secure remote connectivity.
- Manage Dynamic Distribution Lists, Shared Mailboxes, and delegate access (Send As / Send on Behalf / Read & Manage) via Microsoft 365 Admin Portal.
- Monitor CrowdStrike Falcon (CS) and DLP alerts for non-compliant devices; validate detections and escalate as needed.
- Administer Forcepoint Web Security for URL/category whitelisting and blacklisting, raising tickets for L2/L3 approval.
- Troubleshoot Java/Oracle ERP application issues, including Java service and URL configuration.
- Support the network team on VLANs, Trunk/Access ports, DHCP, DNS, subnetting, and switch configuration.
- Monitor network and Wi-Fi infrastructure via CVP Portal, including switch ports.

IT Executive — Marengo Asia QRG Hospital

May 2022 – May 2023

- Troubleshot HIS system, Outlook, printers, SCCM, and OneDrive for corporate and mobile users.
- Configured and maintained CCTV, NVR, and biometric access control systems; performed Active Directory user administration.
- Completed a ward-expansion cabling project, including switch rack installation and LAN cable runs for 20 beds and 2 nursing counters.

IT Executive — Sysnet Global Technologies (Client Site: Marengo Asia QRG Hospital)

Jan 2022 – May 2022

- Provided enterprise desktop support for HIS system, Outlook, SCCM, printers, and OneDrive; configured CCTV, NVR, and biometric access systems.

Technical Support Engineer — Wxit Consultant Services

Dec 2020 – Jan 2022

- Delivered UK-based customer support including antivirus installation, MS Office/Outlook configuration, and IT asset management.

- Installed software and Microsoft Office; configured Outlook and resolved email issues.

PROJECTS & SIMULATIONS

Deloitte Cyber Job Simulation — Deloitte (via Forage)

July 2026

Certificate of Completion issued July 23, 2026 · Practical tasks in Cyber Security

- Completed Deloitte's Cyber Job Simulation on Forage, performing practical, task-based exercises in cyber security investigation and analysis.
- Reviewed a multi-day web application access log (2,000+ requests across 75+ source IPs) to reconstruct user login and API-access sessions.
- Identified and documented a security anomaly in which an expired/stale session token continued to generate automated hourly API requests for 17 consecutive hours, all correctly rejected with 401 Unauthorized responses, before the session was renewed via re-login.
- Produced a written findings report summarizing the anomaly, its likely cause (session/token expiry combined with an unattended polling client), and recommended remediation (shorter polling intervals with back-off, alerting on sustained 401 bursts, and automatic re-authentication handling).

Vulnerability Assessment of Metasploitable 2 — Capstone Project — Ethical Hacking Bootcamp (Cohort-20)

Tools: VMware Workstation Pro, Parrot OS (attacker), Metasploitable 2 (target)

- Performed host discovery, full TCP port/service/OS scans, and NSE vulnerability scripting using Nmap; exported results to XML/HTML for reporting.
- Conducted web server enumeration with Nikto, identifying an outdated Apache/PHP stack, missing security headers, and directory indexing issues.
- Carried out SMB enumeration using smbclient and Enum4linux, uncovering anonymous login access, exposed shared folders, and workgroup/user information disclosure.
- Identified and exploited the VSFTPD 2.3.4 backdoor vulnerability (CVE-2011-2523) using the Metasploit Framework (msfconsole), establishing a Meterpreter session with root-level access.
- Performed post-exploitation verification via Meterpreter and Linux shell commands (sysinfo, shell, whoami, hostname) to confirm system compromise and privilege level.
- Documented 10+ vulnerabilities across FTP, Telnet, HTTP, and SMB services with risk ratings (Critical to Medium) and delivered prioritized remediation recommendations, including patching, disabling insecure services, SMB hardening, HTTP security headers, and MFA enforcement.

CYBER SECURITY TRAINING — CEH (WSCUBE TECH)

- Ethical hacking phases: Reconnaissance → Scanning → Gaining Access → Maintaining Access → Covering Tracks.
- Linux fundamentals, system navigation, and Google Dorking for information gathering.
- Network scanning and enumeration using Nmap, NBTscan, and NFS enumeration.
- Exploitation using Metasploit and public exploit databases; reverse shell and bind shell concepts.
- Social engineering, MITM attacks, and session hijacking techniques.
- DoS/DDoS concepts, malware fundamentals, Wi-Fi hacking, and password cracking (lab environment).
- Cryptography basics and foundational OSINT/Wireshark analysis.

EDUCATION & CERTIFICATIONS

- B.Com — Swami Vivekananda Subharti University
- CCNP — Network Bulls
- CCNA — Ducat
- Certified Ethical Hacker (CEH) — WsCube Tech
- Cyber Job Simulation — Deloitte (via Forage), July 2026
- 12th — National Institute of Open Schooling (NIOS)
- 10th — Jain Vidya Mandir High School
